Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Dd 100 Installation Manual . To get started finding Dd 100 Installation Manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

Dd 100 Installation Manual

Designed to fit in place The DD100 not only gives you digital Take the other end of the Attach the red A “piggyback” Finally, place the Not compatible with the. We appreciate yourCheck back to the websiteThe FL Digital Depth Indicator model DD100 gives anglers what they have been asking for, Digital Depth. Now you can easily and quickly attach the FL Digital Depth Indicator to your transducer cable from your FL series Flasher sonar and get an instant digital depth reading.

Designed to fit in place of the popular D130 or T130 battery indicators, Vexilar has been selling for years. You can easily outfit your Pro Pack, Ultra Pack or Genz Pack with the DD100. The DD100 not only gives you digital depth, but also gives you the battery status by pressing a button. When not in use, the DD100 goes to sleep, so you no longer have to worry about draining your battery when not in use. Installation is easy. Simply unplug your transducer from the back of your Vexilar and plug into the DD100 connector. Take the other end of the DD100 and plug it into the back of your Vexilar. Attach the red power lead from the FL Digital Depth Indicator to the positive terminal post of your battery. A piggyback terminal has been provided for easy connection to the Genz or Pro Pack. If you have an Ultra pack, please go to the Vexilar web site for detailed mounting instructions. Finally, place the FL Digital Depth Indicator where the old battery indicator was and attach with either plastic push pins or use a small bolt and lock nut. - **1.0.**

In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Please try your search again later.This product is a durable and designed for ice fishing applications. Provided by Vexilar.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Ice is best 5.0 out of 5 stars This is my first full season using my vex. Right after I purchased it they came out with the new improved models. I wish vexilar would come out with a GPS model so you can mark those HOT SPOTS rite on your unitCouldnt be more happy. It fit, perfectly where the D100 was and tells me the depth so I know what setting to turn the depth finder to.However, the battery gauge does not read on it. Its always at 100%. Three of us installed them on three separate fl22s and all with the same results. Not taking it off though. Love the digital depthRemember to use it on High power only. Dees not work on low power. This seems to confuse a lot of users.Works great, he loves it.Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. I was looking at them yesterday, but havent pulled the trigger yet. Thanks and tightlines! Icestalker. One above and one below the bigger hole. Thats the area to mount your DD100. The unit comes with two small pegs that fit into the small holes to secure the DD100 to the box. I assume its a newer box. If you have the older Genz Box with no holes youll have to secure it with some small screws. Any other questions feel free to message or just ask. Good luck. Take care and tight lines.<http://www.oipipleszno.pl/userfiles/hydrovane-218-manual.xml>

Thanks for the info Simply unplug your transducer from the back of your Vexilar and plug into the DD100 connector. Take the other end of the DD100 and plug it into the back of your Vexilar. Attach the red power lead from the FL Digital Depth Indicator to the positive terminal post of your battery. A piggyback terminal has been provided for easy connection to the Genz or Pro Pack. If you have an Ultra pack, please go to the Vexilar web site for detailed mounting instructions. Finally, place the FL Digital Depth Indicator where the old battery indicator was and attach with either plastic push pins or use a small bolt and lock nut. Hope this helps you out. Where does it get connected to. Also seen the flx28 at the show and it looked awesome. Its nice when youre fishing deep water to know the exact depth instantly instead of trying to count ticks. Battery status works well also. I have a soft case for my vexilar though and where it mounts its hard to see without pulling the case down to look at it. Wish I could mount it on the front somewhere. The 28 has the depth and battery status built into the display. I have a fl8 will it go on that Without them we would not be here.
